Why Somnia?

I build autonomous AI agents that ship to mainnet. Cerberus — my submission to the Somnia Agentathon — is a 3-agent security pipeline on Somnia Testnet using JSON API Request and LLM Inference as first-class primitives. Before Cerberus, I shipped Lucarne (83k+ mainnet txs on X Layer) and PROVUS (80k+ mainnet txs on OG Chain). I don't build demos — I build agents that run 24/7 with verifiable on-chain proof.

Stack

Layer	Technologies
Smart Contracts	Solidity (Hardhat, OpenZeppelin), EVM (Somnia, X Layer, OG, Arbitrum), Solana (Anchor)
Agent Runtime	TypeScript (Node.js), Python (FastAPI), autonomous 30-60s loops
AI/LLM	Somnia LLM Inference, Claude (Anthropic), Qwen-2.5-7B (TEE), deterministic AI pipelines
Infrastructure	Railway, Vercel, Docker, systemd, MCP servers
Protocols	x402 micropayments, EIP-3009, EIP-7702, TEE attestation, Merkle archives

Featured Builds

Cerberus — Somnia Agentathon 2026

3-agent autonomous security. OracleGuard → ThreatClassifier → CircuitBreaker.

- 60s autonomous pipeline using Somnia JSON API Request + LLM Inference
- Deterministic threat classification with verifiable on-chain receipts
- Solidity `CerberusSentinel.sol` with auto-pause circuit breaker
- 4-tab live dashboard with one-click anomaly simulation for demo

Lucarne — World Cup Signal Intelligence

Autonomous agent on X Layer Mainnet. 83,000+ on-chain attestations.

- 48-nation scoring every 60s, 7 Solidity contracts, 5-track coverage
- Signal-gated write loop, MCP server, x402 EIP-3009 USDC settlement
- 4/5 correct match calls with real OKB staked (80% hit rate)
- Live: lucarne-xyz.vercel.app

PROVUS Protocol — Verifiable Signal Engine

Autonomous volatility attestation on OG Chain Mainnet. 80,790+ transactions.

- Yang-Zhang volatility engine, 60s attestation loop, 5 Solidity contracts
- OG Compute (Qwen-2.5-7B TEE inference) + OG Storage (Merkle decision archives)

- ChainGPT AI audited. Live dashboard on Vercel.
- Built for 0G APAC Hackathon 2026

Parry Protocol — OKX Build-X Winner 🏆

Delta-neutral Impermanent Loss protection for Uniswap V3 LP positions.

- Yang-Zhang volatility engine drives autonomous hedge sizing
- Solidity vault + TypeScript agent loop (120s) + MCP server + x402 paywall
- **Winner — OKX Build-X Hackathon 2026**

VEIL Protocol — Confidential CDS with Verifiable Identity

Autonomous settlement agent with T3N TEE-attested identity on Arbitrum Sepolia.

- Credit Default Swap agent, 30s settlement loop with Chainlink oracle
- Terminal 3 T3N SDK — hardware-attested agent identity (WASM + TEE)
- Submitted to T3N Agent Dev Kit Bounty Challenge

Aegis Protocol — Solana DeFi Vault

On-chain vault program on Solana Mainnet with autonomous close mechanism.

- Anchor framework (Rust), deployed to Solana mainnet
- Recovered 2.31 SOL via program close — zero-impact teardown on live systems

By The Numbers

Metric	Value
Mainnet transactions shipped	163,000+ (83k Lucarne + 80k PROVUS)
Autonomous agents built	6 (Cerberus, Lucarne, PROVUS, Parry, VEIL, Aegis)
Solidity contracts deployed	18+ across 5 chains
Hackathons completed	5 (OKX Build-X 🏆, iExec Vibe Coding, T3N ADK, 0G APAC, Somnia Agentathon)
Chains deployed to	Somnia, X Layer, 0G, Arbitrum, Solana
GitHub contributions (last year)	553

What I Bring

- **Ship to mainnet.** I don't stop at "works on localhost." My agents run on mainnet with real gas, real stakes, and verifiable transaction histories totalling 163,000+.
- **Autonomous from day one.** Every agent I build runs on a loop (30-60s), self-heals, and survives restarts without human intervention.
- **Full stack, solo.** Contracts (Solidity), agents (TypeScript/Python), frontends (Next.js), infrastructure (Railway/Vercel/Docker) — I build the full pipeline.
- **Verifiable by design.** Every claim in my READMEs links to a block explorer. No marketing — just proof.

- **Proven winner.** Parry Protocol won OKX Build-X 2026. I know what judges value and how to ship under pressure.

"I build agents that run 24/7 with verifiable on-chain proof. 163,000+ mainnet transactions across 5 chains. Cerberus is on Somnia. Let's talk."
